Subject: flint hills

Hi Brandon,

I spoke with Elizabeth yesterday afternoon regarding the overhead benzene product. Like we talked yesterday, she indicated the overhead benzene product is mixture light end hydrocarbons and small amounts of water, but that it is not pure benzene. She could not indicate the percentage of benzene either.

Also, she could not clarify what was in the waste water. she said that it was whatever was going through the water treatment plant at the time of the release. It also depended on where in the plant the water was coming from.

I know this does not help much, but that is all she could tell me.
